CHAPTER 1 – INTRODUCTION TO CSS

HTML is just a skeletal layout of a website. We need CSS to design a website, add styles to it and make it look beautiful.

What is CSS?

CSS stands for cascading style sheets. CSS is optional but it converts an off looking HTML page into a beautiful & responsive website.

Why to learn CSS?

CSS is a very demanded skill in the world of web development. If you are successfully able to master CSS, you can customize your website as per your liking.

Your first line of CSS

Create a .css file inside your directory and add it to your HTML. Add the following line to your CSS –

```
body {
background-color: red;
}
```

This will make your page background as red.
